## Announcing a New Alliance with Source Carbon:

### Elevating Sustainability in Lighting

Through a strategic alliance with Source Carbon, [sourcecarbon.com](https://sourcecarbon.com), EOS Light will now seamlessly integrate **low carbon logistics** – with respect to the *shipping footprint* of all LightPanel, LightPaper and other innovative EOS Light backlighting products – as a standard EOS Light benefit to you and end users, ie. at no incremental cost.

Source Carbon's emissions calculator delivers real-time shipping impact carbon offset assessments, providing retirement certificates of premium, Gold Standard-certified carbon credits. Projects include Blue Carbon, Renewable Energy, and Sustainable Agricultural Practices.

Each verified offset ensures transparency for ESG (Environment, Social & Governance) reporting and provides a new point of distinction and new talking points that demonstrate our interest in sustainability practices.

This exclusive partnership – distinguished by its precision and access to elite projects – empowers EOS Light to lead the way in sustainability within the lighting industry.
